

ABSTRACT

5 The present invention provides a pharmaceutical
composition for application to the mucosa to be used in
drug therapy comprising a water-insoluble and/or water-
low soluble substance, a medicament, and an aqueous
medium, and having an osmotic pressure of less than 290
mOsm. This composition is superior over conventional
pharmaceutical compositions for application to the
10 mucosa, due to efficient and high permeability to the
blood at the mucosa. The present invention further
provides a pharmaceutical composition for application to
the mucosa comprising a hemostatic agent and a
medicament. This composition is superior over
15 conventional pharmaceutical compositions for application
to the mucosa, due to permeability and retentivity at the
mucosa.
